# AUTUMN 2021

## Scanner for the Ham Shack? A Quick Look at What to Consider

**A** Amateur Radio Today host Brad Darnell - WA9BD of Avon, Indiana recently discussed scanners for those who may be interested in adding one (or more) to their ham shack, so we're sharing some of his insights. Brad has been a licensed ham radio operator for over 30 years, getting into the hobby after first listening to short wave radio for a while.

### Why consider adding a scanner to your ham shack?

Maybe you're simply interested in listening to amateur radio repeaters. Perhaps you'd like to monitor unencrypted emergency service traffic such as paramedics, fire, and police in some areas. You may want to hear maritime transmissions, railroads, aircraft, local utilities, and businesses. If you'd like to monitor cell phone calls though, you're out of luck. Scanners do not have the ability to monitor cell phone transmissions, which is prohibited by the Electronic Privacy Communications Act.

### Early Scanners

Early scanners were crystal-controlled and called "rock boxes", because of the use of crystal rocks, of course. These scanners had a removable cover or door which enabled you to install crystals inside and change them as needed. You'd buy the crystals separately and install them in the scanner. After turning it on and setting the squelch, you were ready to listen with no programming required. The scanners received UHF, VHF High and VHF Low.

Vintage Regency ACT-R-106 10 CH Scanner  
At press time, available for \$28.90 or Best Offer on Ebay

WA9BD fondly recalls his first crystal "rock box" scanner, a Regency 10-channel 3-band. He found it to be very reliable and a lot fun.

## 1ST YEAR BOARD

**AAØAC**  
Dave Davis  
  
218-348-6649  
aaØac@outlook.com

### Present:

### Board Members

**Gene Ellingsen-NØVRM, Mike Lovold-NØPDG, Robin Davis (via phone), Dave Davis-AAØAC (via phone), Bruce Carlson-KNØNUL, Gary Minter-KD9ABS**

### Board Advisors (Non-Board Members)

**Doug Nelson-AAØAW, Randy Wabik-KRØB**

**Guest Del Minter-KEØCLI**

Meeting called to order by President Gene-NØVRM

### Minutes:

Posted on web site and in the newsletter. Any questions? Move to approve by Gary-KD9ABS, seconded by Mike-NØPDG, motion passed

### Treasurer's Report:

Checking .....	3,138.31
Savings .....	2,174.01
Subtotal Cash .....	\$5,312.32

Winter CD.....	1,724.37
Summer CD .....	0.00
Subtotal CD .....	\$1,724.37

Assets Subtotal:..... \$7,036.69

Outstanding Checks:

Mahtowa Repeater .....	-1,100.00
Bob Boyd-KDØLYN Memorial.....	-1,190.00
Reserved Funds.....	-\$2,290.00

Grand Total..... \$4,746.69

Received refund for Picnic Damage Deposit of \$100.00. Motion to approve by Mike-NØPDG, Gary-KD9ABS seconded, motion passed

*Continued on Page 3*

# ARAC Board Meeting - September 7, 2021

Raffle money is used to offset the costs of the picnic. Previously, used to offset the cost of the radios raffled off. Suggest to make it part of next year's raffle - extra funds will go to the Bob Boyd Memorial

## New Business:

Thank you letter from WDSE for our donation. Donation made in lieu of us paying rent for our antennas on their tower and our repeaters

## Grants:

Enbridge Energy, parent company of Husky Oil (Novis), Super One – Gene-N0VRM has filled out several grants seeking funds for our Club. Hard to find grant applications without the Club being a 501C3. We are a 501C7. Hard to qualify for donations, paperwork nightmare, to donate outside of the 501C3. MN Power is an example of donors requiring the 501C3. Consider becoming a 501C3 as a Club with discussion down the road

Gene-N0VRM will keep looking for places to apply. Most take four (4) to eight (8) weeks processing before the Club would receive a response

## New Organization:

Western Lake Superior Amateur Responders - resource to draw from for Ham Radio, individual or Club. It is a 501C3. New organization formed in the area. There are Federal and State requirements (paperwork) that they have completed. There is a Board of Directors. This organization accepts donations and as such, donors get to take the donation off their taxes

## Carlton County Fall Fest:

Fall Fest, September 25, 2021, 9:00 am start. Preregistration required for tables

## Repeater:

Randy-KR0B has been working some numbers to almost double our signal from what we have now, 100 watts, calculated the costs. Repeater DR1s are no longer available on sale and DR2 have increased their prices. Upgrade to Repeater at WDSE, 7/8 Hard line, new antenna, 100 watt out. Pretty good improvement – may need to talk to the Engineer, previously raised concerns about the wind load on the tower

Mike-N0PDG and Doug-AA0AW received an email from Rex K0KP. He can no longer key up on the 94 Repeater, from his home, claiming something has changed. The antenna is six (6) to seven (7) years old, replaced by Randy Hagen-N0BZZ, just the antenna. How long has it been since the Receivers have been changed or updated? They do de-tune over time, with usage. The current Repeater has degraded and it is rated whatever the FTM400 will allow

## Testing:

Testing session for Tech License, at end of current class, second week in January 2022. If someone doesn't want to wait, contact Doug-AA0AW via email to schedule private testing session

Motion to adjourn by Dave-AA0AC, seconded by Gary-KD9ABS, motion passed at 7:22 pm

# ARAC Club Meeting

September 9, 2021

There were no official Minutes taken for this meeting, however the Club voted on acceptance of the August Treasurer's Report, submitted by Bruce Carlson - KN0NUL as follows:

## August 2021 Treasurer's Report for presentation at September 2021 club meeting

Checking	\$	3,138.31
Savings	\$	2,174.01

**Subtotal Cash**            **\$5,312.32**

Winter CD	\$	1,724.37
Summer CD		0.00
<b>Subtotal CDs</b>		<b>\$1,724.37</b>

**Assets Subtotal: \$7,036.69**

### Minus Reserved Funds

Mat. Rptr.	(\$1,100.00)
Bob Boyd Memorial	(\$1,190.00)

**Reserved Subtotal: \$2,290.00**

**Grand Total    \$ 4,746.69**

The Program was presented via Zoom and featured **Astro Bob**.

## Prez Sez ...

Hi everyone,

Well, it is that time of the year. We start doing those last minute antenna projects before the snow flies. While wanting to quickly finish the project, don't forget to do it safely:

- ♦ Don't try to do it without help
- ♦ Be sure to have a meeting with everyone involved so you all know what the plan is
- ♦ Remember, extra sets of eyes prevent an accident
- ♦ Have all the proper tools and make sure they are in good condition
- ♦ Inspect all ropes to be used so you don't have a failure

Taking a few extra minutes will help ensure a safe and successful project!

Also:

We are now taking nominations for Board positions, so if you would like to support the Club, let any of the current Board members know.

73,

Gene Ellefsen NØVRM

## ARAC New or Upgraded Hams

General: Aaron Johnson-KE0OPK  
Technician: Mara Ohrt-KF0FLG  
Technician: Jordan Chopskie-KF0EDQ  
Technician: Tom Maida-KF0ALP

**Congratulations on passing your test and  
welcome to the ARAC Club!**

## U.S. AIR FORCE MILITARY AUXILIARY RADIO SYSTEM

Minnesota State MARS Director  
Reginald B. Cass / AFS5MN

Gene Ellefsen  
NØVRM

Thank you for your time and interest.

Air Force MARS membership could be for you. We do hope that it is.

If you have the following interests, and capabilities, we are interested in recruiting you to become an Air Force MARS member. Completion of the following on line training is mandatory:

Personally, Identifiable Information (PII) <https://iatraining.disa.mil/eta/piiv2/launchPage.htm>  
Cyber Awareness [https://iatraining.disa.mil/eta/disa\\_cac2018/launchPage.htm](https://iatraining.disa.mil/eta/disa_cac2018/launchPage.htm)

If you have completed: [Incident Command System](#) (ICS) -100, 200, 700, and 800 training, and have obtained certification for Air Force MARS or are willing to obtain this training, again, Air Force MARS could be for you.

You must be interested in joining a group of individuals that are dedicated to amateur radio, emergency communications, and willingness to learn and used military communications procedures for voice and digital communications.

You must have equipment that will meet the minimum requirements for voice and digital operation. The equipment will be: transmitter, receiver, (transceiver) modified to operate out of amateur radio bands, computer, modem, and antenna's that are designed to operate on military assigned frequencies. (The best antennas will be a dipole cut to the operational frequency. NVIS antennas work best. You will not need a linear amplifier, however if you have one that will operate on out of amateur radio bands that will be a plus)

You must go through and complete training. You are allowed up to 180 days to do so.

Air Force MARS operation's and procedures are based upon "MARS Operating Instruction", (MOI). The MOI manual uses as its basis for instruction a series of Allied Communications Publications (ACP's), Department of Defense Directives, Department of Defense Instructions, and Department of Defense Manual.

If you already belong to a MARS program and would like to consider Air Force MARS, please contact one of the recruiting team members.

Our recruitment team is as follows:

AFA5XK Dave, WB7DRU [wb7dru@gmail.com](mailto:wb7dru@gmail.com)

AFA5ZV Randy, KRØB [afa5zv@gmail.com](mailto:afa5zv@gmail.com)

AFA5JY Reg, KAØRJY [reg\\_cass@msn.com](mailto:reg_cass@msn.com)

## US Amateur Radio Bands

### US AMATEUR POWER LIMITS

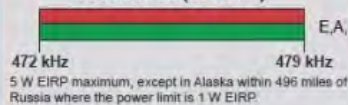

FCC 97.313 An amateur station must use the minimum transmitter power necessary to carry out the desired communications. (b) No station may transmit with a transmitter power exceeding 1.5 kW PEP.

On March 28, 2017, the Federal Communications Commission adopted rules that will allow Amateur Radio access to 472-479 kHz (630 meters) and to 135.7-137.8 kHz (2,200 meters). However, amateurs cannot use these frequencies until 30 days after the Report and Order is published in the Federal Register and the final procedures for registering stations with the Utilities Telecom Council (UTC) have been approved and announced. At the time this chart was created, the Report and Order had not been published and the UTC online registration site is not yet available. Follow ARRL news for further information. New charts will be published at [www.arrl.org/graphical-frequency-allocations](http://www.arrl.org/graphical-frequency-allocations) when the bands are fully available for use.

#### 2,200 Meters (135 kHz)

#### 630 Meters (472 kHz)

#### 160 Meters (1.8 MHz)

#### 80 Meters (3.5 MHz)

#### 60 Meters (5.3 MHz)

#### 40 Meters (7 MHz)

#### 30 Meters (10.1 MHz)

#### 20 Meters (14 MHz)

#### 17 Meters (18 MHz)

#### 15 Meters (21 MHz)

#### 12 Meters (24 MHz)

Effective Date for  
2,200 and 630 Meters  
to be announced

**ARRL** The national association for  
**AMATEUR RADIO**

### KEY

Note: CW operation is permitted throughout all amateur bands.

MCW is authorized above 50.1 MHz, except for 144.0-144.1 and 219-220 MHz.

Test transmissions are authorized above 51 MHz, except for 219-220 MHz.

- = RTTY and data
- = phone and image
- = CW only
- = SSB phone
- = USB phone, CW, RTTY, and data
- = Fixed digital message forwarding systems only

- E = Amateur Extra
- A = Advanced
- G = General
- T = Technician
- N = Novice

See **ARRLWeb** at [www.arrl.org](http://www.arrl.org) for detailed band plans.

## Next ARAC Board Meeting

Tuesday, October 5, 2021

@ 6:30 p.m.

Sammy's Pizza

## Next ARAC Club Meeting

Thursday,

October 14, 2021

7 p.m.

Coppertop Church!

**PLEASE WEAR A MASK,**  
as requested by our hosts at the  
Coppertop Church!

**October 14th**

**What:**

**SWR Mobile Radio Check**

**Where:**

**Parking Lot after the  
Club Meeting!**

- ◆ *Do you know the Standing Wave Ratio on your mobile radio?*
- ◆ *This important test will tell you how much power your radio is transferring to your antenna*
  - ◆ *The lower the SWR reading, the better*
- ◆ *See if you're losing output power!*

*Interested in providing a program,  
or have an idea for one?*

## Scanners, Continued from Page 1

### Evolving Technology

As scanner technology evolved, more channels and bands were added and soon programmable models were introduced. Scanners grew as a hobby and more people, both law abiding citizens and criminals, were monitoring police & emergency traffic. Police communications started to move from the VHF bands to UHF, going to 400 MHz and then to 800 MHz analog. Then digital communications dawned on UHF, primarily 800 MHz or 900 MHz, as is still in use today.

WA9BD notes that there still is some VHF analog out there being used by smaller police departments in little towns here and there. They are usually on 154 MHz with a single Motorola base station and mobile units out in the field. When you find these, it's an interesting and novel occurrence, a little glimpse of traveling back in time...

With 800 MHz digital systems, microwave transmissions and the internet of course, law enforcement can easily establish connectivity state-wide. A small town police department or city can talk amongst its group of officers and also connect to an adjacent jurisdiction as the need arises, as well as the state police. They can use a variety of channels to talk to other agencies while using the same radios to talk to each other in their local departments.

Motorola  
Base  
Station

### Trunking

Around 25 years ago or so, trunking technology entered the scene. Most current public safety systems and many utility companies are using trunking systems. In trunking, an entity is assigned a group of frequencies and one or two of the frequencies is called a control frequency.

WA9BD describes the fundamentals: "When a unit in the field, such as a police officer, paramedic, fire fighter, or utility lineman, keys his radio, the control channel recognizes that signal and it shifts an unused frequency to that radio so that he can communicate with headquarters or car to car, whatever or however the department or talk groups are set up. These days many of them are digital. Just like in amateur radio there is DMR, there's P25, Phase 1 and Phase 2. There's ProVoice, a Motorola proprietary standard. And [the various technologies] don't talk to each other. So if an agency is on DMR, everything in that agency needs to be on DMR. It's the same way as in amateur radio. We've got D Star, DMR, Straight FM. All the technologies that we have, it's the same way. Trunking systems are more sophisticated as they can be encrypted. If an agency does have an encrypted system, there's not a [scanner] out there that would enable you to hear it. "

**Side note alternative to buying a scanner:** There is a website called Broadcastify.com where you can select a city and a service, if it is listed, then listen to it on the internet. This is accomplished by people feeding the scanner audio from their local jurisdictions to Broadcastify, who in turn, broadcasts it to the internet.

### Choosing a Scanner

WA9BD says that before you buy a scanner, you might want to consider what it is you actually want to listen to first. There are a lot of different scanners on the market, but the biggest brand with the most variety of offerings is Uniden, a name that has been around for decades in the communications industry. There are basic scanners without as many memory settings and scanners with a multitude of memory settings and features.

*Continued on Page 16*

### Simulcast Systems

Find out what your city, county and state are using and if they are simulcast systems. What is a simulcast system? WA9BD describes how it works: "One 911 call center may be set up for a sizable geographic area to dispatch police, fire and paramedics. They will use multiple towers and multiple receive sites in order to cover the entire area. This is critical so that there is no loss of communications in an emergency. At 800 MHz, the range is somewhat limited, the higher you go in frequency.

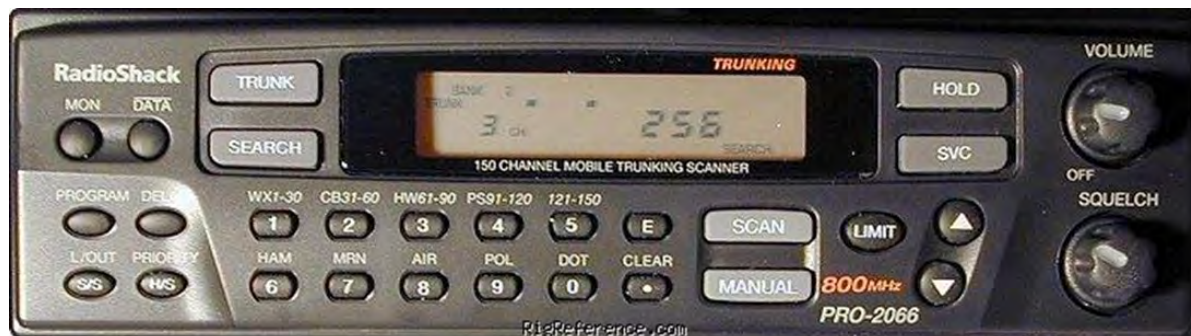

"So in creating a simulcast system, when the dispatcher makes a call, it goes to the transmitter in all of the towers in the geographic network and they all transmit that call. If you were to try to hear it on a **typical** scanner, what happens is this: Since those towers are various miles away from your position, for example there might be one that is 6 miles away from your ham shack and yet another that's 8 miles away from you, and perhaps one that is only 2 miles away. What happens is all those signals arrive to your scanner from different distances and the scanner does not know what to do with them because they are all out of sync. Some are closer so they arrive sooner. Others arrive at different intervals. You could not hear the whole conversation because the audio is choppy. Fortunately, Uniden does make a scanner that deals with this issue, the SDS series. The general opinion is that **SDS** stands for **software defined scanner**, but this is not confirmed. These scanners have 'I/Q' technology and are great scanners for simulcast systems."

So, if all you really are interested in listening to is amateur radio repeaters, any scanner will work, and you could start with a used one. A basic scanner will also enable you to listen to weather and even railroads. If you want to listen to emergency traffic, Brad - WA9BD says that if you find out your local system is 800 MHz trunked, but not simulcast, Uniden makes some good scanners for that purpose that aren't as expensive as their simulcast-capable models. And, if you find out your local city county is encrypted, don't waste your money on buying a scanner if your primary goal was listening to them. Again, a scanner will not be able to listen to encrypted transmissions.

### What Scanners are in WA9BD's ham shack?

#### 1. The RadioShack Pro-2066

Brad has owned this for 20+ years. Made by Uniden, this scanner receives all the way up to 800 MHz. With 150 channels in 10 banks, it receives all modes: aircraft, FM, High & Low, UHF. It is a "TrunkTracker", so it does do trunking. If you have a conventional system, such as Motorola phase 1 and 2 that are trunked, it handles that. It has a standard BNC antenna connector on the back and it is 12 Volt, so you can run it in your mobile. You can still buy this scanner used at hamfests and various places on the internet.

2001

Continued on Page 17

## Scanners, Continued from Page 16

### 2. The Uniden Bearcat TrunkTracker III BC15X

This is an analog scanner and has been on the market for six years or so. It sells for about \$170 and it has got:

- ◆ 9000 dynamically allocated channels
- ◆ Close Call RF Capture Technology, a Uniden feature that instantly tunes to signals from nearby transmitters. Close Call can operate by itself or in the background while scanning and/or searching.
- ◆ TrunkTracker III technology lets you can keep up with the action on Motorola, EDACS and LTR systems. Individual channel volume offset. Alpha Tagging
- ◆ Location-based scanning if you connect an optional GPS to it.
- ◆ State-by-state pre-programmed channels for local police, DOT, and Highway Patrol frequencies when you travel, without having to program
- ◆ 100 system Quick Keys with 10-channel group Quick Keys per system; system/channel number tagging for rapid access.
- ◆ Continuous Band Coverage\* - 25MHz to 1.3GHz Excluding UHF TV and Cellular

Uniden  
Bearcat  
TrunkTracker III  
BCT15X

### 3. The Uniden SDS200 True I/Q TrunkTracker X

Brad says this digital scanner does everything you could want, including taking care of simulcast systems. He notes that the scanner has a steep learning curve to program these, so program it with software. Uniden includes its own free Sentinel software, for programming channels and for customizing your color display settings. Sentinel keeps the scanner up to date for as long as you own it. TrunkTracker X technology provides the best digital decode performance in the scanner industry. Direct Ethernet connectivity for streaming and control. Complete USA/Canada radio database. Location control for simple operation and a large 3.5" customizable color display.

#### Other features:

- Location-Based Scanning
- ZIP Code Selection for Easy Setup
- GPS Connectivity for simple mobile operation
- Close Call™ RF Capture with Do Not Disturb
- 8 GB micro SD
- Soft Keys for Intelligent UI
- Recording, Playback, and Replay
- Temporary Avoid
- Fire Tone-Out Alert

#### Frequency Coverage:

- 25-512 MHz
- 758-824 MHz
- 849-869 MHz
- 895-960 MHz
- 1240-1300 MHz

**Bottom line:** If you want a very versatile, top-of-the-line scanner, the **Uniden SDS200** is it. At \$700 it's a little pricey, but many in the hobby say it is well worth it and they expect it to be relevant for many years to come.

Our thanks to Brad Darnell – WA9BD for sharing his expert opinion. You can find Brad on Amateur Radio Today TV as an Roku app on a device near you. ★

Uniden SDS200 True I/Q TrunkTracker X

Tell us about your experiences with scanners at [KE0NQS.mn@gmail.com](mailto:KE0NQS.mn@gmail.com)  
& we'll share it in an upcoming Relay!

## The ARAC RELAY

Published monthly and distributed free to members, "The RELAY" is the official publication of the Arrowhead Radio Amateur Club, Inc. Members are encouraged to submit articles, opinions, and classifieds. Your submission will be placed as soon as possible providing it does not conflict with the bylaws of the Arrowhead Radio Amateur Club, Inc. The editors reserve the right to omit any submission that is not a required item. If a submission is questionable, it will be presented to the Board of Directors at the next scheduled board meeting for authorization.
